

External Quality Assessment Program for Adrenocorticotrophic hormone ACTH and Cortisol

Labquality is announcing a new EQA pilot study for the two hormones ACTH and cortisol. The scheme is mainly intended for ACTH analysis, but it will also include the possibility to analyse cortisol from the same samples. The study is suitable for different methods.

The pilot study will include two samples that should be analysed as regular patient samples upon rehydration. The participants submit their results through the electronic platform LabScala and results are processed by the EQA Coordinator. Result evaluations including comments by the Scheme Expert will be published in the final report distributed to the participants.

Round 1, 2022 will be a pilot study free of charge for a limited number of participants. The pilot round will open in June. Two rounds will be included in the program of 2023.

2704 ACTH and Cortisol

- Samples:** 2 lyophilized samples
Distribution: 1, 2022 June – pilot study free of charge
Participation: Limited number of samples available
Registration: Please register by **May 15th 2022** only through **this link**
