

External Quality Assessment Program for Monkeypox virus, nucleic acid detection

Labquality is announcing a new EQA pilot study for nucleic acid detection of Monkeypox virus. The pilot will include two swab samples simulating patient samples from lesions. The samples should be analysed as regular patient samples. The participants submit their results through the electronic platform LabScala and results are processed by the EQA Coordinator. Result evaluations will be published in the final report distributed to the participants.

Round 1, 2022 will be a pilot study free of charge for a limited number of participants. The pilot round will open in December.

5683 Monkeypox virus, nucleic acid detection

- Samples:** 2 swab samples
Distribution: 1, 2022 in December, free-of-charge pilot study
Participation: Limited number of samples available
Registration: Please register by 30 October 2022 only via [this link](#)
